

# Mergano Warehouse Structure

The structure divide into 4 big sections are core, bean, dao and gui.

**Core** – package that combine all common functions in software including bean, dao and other function class ex: connectDB

**Bean** – package that contain the bean blinder which do getter and setter in the role for storing data as object to prepare statement before insert, delete or update

**DAO** – data access object it's package that contain the query method which get the query data from database

**GUI** – graphic user interface in this package contain all view class that contact with the user and display the output and get data input.
